## AIRCORE DRILLING COMMENCES AT BRIAN'S PATCH GOLD TARGET

Santa Fe Minerals Ltd (“**Santa Fe**”, “**SFM**” or “**the Company**”) is pleased to advise that a 25 hole aircore drilling commenced at its Brian’s Patch gold target in Western Australia.

Figure 1 - Challa Project area

### Brian's Patch - Gold

The Brian's Patch area is defined over 600m x 300m by a historic surface geochemistry gold anomaly and several gold nugget patches within laterite. The core of the gold anomaly at >10ppb Au is in two sections. The north section is 300m x 150m with a maximum gold result of 305ppb and the southern section is 250m x100m with a maximum gold result of 42ppb. There is no outcrop and the laterite cover is only 2-5m thick.

Figure 2 - Historic Brian's Patch soil geochemistry and proposed Aircore drill hole collars.

The 25 Aircore drill hole program is designed to test for bedrock gold mineralisation beneath both the northern and southern soil anomalies.

The program will take approximately 5 days to complete, with assay results expected in late February, 2021.

Authorised for release by the Board of Directors.
